¹ These data are provisional and include cases that are under investigation, some of which may become 'Not a case'.

² Rate is based on the cumulative total for the current year (12 months up to and including April 2018) or the previous year (12 months up to and including April 2017), expressed as cases per 100 000. This includes cases still under investigation.

³ Cases of gastroenteritis from a common source or foodborne intoxication.

⁴ Only acute cases of this disease are currently notifiable.

⁵ Numbers are based on report date. This may not be a good indicator of newly incident cases as a high proportion of notifications have substantial reporting delays.

Other notifiable infectious disease reported in April: Brucellosis (3) , Chemical poisoning from the environment (2) , Chikungunya fever (1) , Cholera (1) , Hepatitis NOS (2) , Toxic shellfish poisoning (1) , Zika virus (1)
